Understanding Geometry Dilations

What Is a Dilation in Geometry?

A dilation is a transformation that produces an image that is a scaled version of the original figure. Unlike other transformations such as translations or rotations, dilations change the size of a figure but preserve its shape. The result is similar to enlarging or reducing a figure proportionally.

Key features of dilations include:

- The center of dilation (a fixed point about which the figure is scaled)
- The scale factor (which determines how much the figure is enlarged or reduced)

Types of Dilations

Dilations can be classified based on the scale factor:

- Enlargements: When the scale factor > 1 , the image is larger than the original.
- Reductions: When the scale factor is between 0 and 1, the image is smaller.
- Identity dilation: When the scale factor $= 1$, the figure remains unchanged.

Mathematical Representation of Dilations

Given a point $P(x, y)$, the center of dilation $C(h, k)$, and a scale factor k , the image point P' after dilation is found by:

$\backslash$

$$P' = (h + k(x - h), \backslash; k + k(y - k))$$

 $\backslash$

This formula applies to each point of the figure, producing a scaled image.

Applying Dilations: Step-by-Step Approach

1. Identify the Center of Dilation

- Usually given in the problem.
- If not explicitly provided, look for clues or diagrams.

2. Determine the Scale Factor

- Given directly, or deduced from the problem.
- Can be positive or negative, affecting the orientation of the image.

3. Use Coordinates or Geometric Properties

- For coordinate geometry problems, apply the dilation formula to each vertex.
- For geometric figures, use proportional reasoning to find new points.

4. Draw or Sketch the Dilated Figure

- Accurately plot points after dilation.
- Connect points to form the dilated figure, ensuring proportionality.

5. Verify Your Results

- Check that the distances from the center of dilation to points are scaled appropriately.
- Confirm that the figure is similar to the original.

Solution steps:

- Identify the center $C(2, 3)$.
- Apply the dilation formula to each vertex:

- For $A(2, 3)$:

$\{$

$$A' = (2 + 2(2 - 2), 3 + 2(3 - 3)) = (2 + 0, 3 + 0) = (2, 3)$$

$\}$

- For $B(4, 7)$:

$\{$

$$B' = (2 + 2(4 - 2), 3 + 2(7 - 3)) = (2 + 4, 3 + 8) = (6, 11)$$

$\}$

- For $C(6, 3)$:

$\{$

$$C' = (2 + 2(6 - 2), 3 + 2(3 - 3)) = (2 + 8, 3 + 0) = (10, 3)$$

$\}$
